

1 **ABSTRACT OF THE DISCLOSURE**

2 A dice game embodied in a table or slot machine format utilizing preferably two dice
3 outputs to generate numbers based multiple repetitions or a count of numbers prior to novel
4 termination and payout events. These games include counting the rolls on different players and
5 comparing those rolls and making an award to the player making (a) the most rolls, (b) the most
6 points, (c) the fewest points or rolls or (d) enhanced pay outs for higher targets during a limited
7 (e.g. 4) number of dice rolls. The invention also envisions the addition of points in a given
8 number of rolls to generate a total which is compared to a central number or to reach certain
9 specific numbers. A video layout is disclosed which replaces traditional displays with multiple
10 dice rolls in a novel fashion otherwise consistent with the disclosure herein. Payouts are made
11 based on the total number of wins or consecutive wins without reference to any underlying wager
12 made by the player on the other rules of game play.
